VK-300_x

Integrated Amplifier

Balanced Audio Technology is pleased to introduce our superlative new **VK-300X** integrated amplifier. The VK-300X is so versatile, beautiful, and powerful that it will define a new reference for integrated amplification.

Effortless Power

When we began this project, our goal was to design an integrated amplifier that could satisfy the needs of the world's most discriminating music lovers. The Balanced Audio Technology VK-300X exceeds our highest expectations in this regard, and can form the nucleus of the finest high-end music system. The VK-300X provides a robust 150 watts per channel into 8 Ohm loads and easily doubles this output into 4 Ohm loads.

Ultimate Flexibility

Not only can the VK-300X form the nucleus for outstanding music reproduction, it can be configured to meet almost any system need. Add remote control for the ultimate in convenience. Specify the built-in phono module and you'll obtain superb reproduction of your analog record collection from either moving magnet or low output moving coil cartridges. Add the musical texture that only tubes can provide by specifying the optional 6922 tube-based front-end. Or choose the ultimate in sonic performance by adding the optional 6H30 **SuperTube** front-end gain stage. The extraordinary versatility of Balanced Audio Technology's VK-300X allows it to perform without peer and thus truly stand apart from the crowd.

Preeminent Design

Many integrated amplifiers offer the benefit of convenience and little more. The VK-300X is different by design. Its circuitry has the same caliber as those found in Balanced Audio Technology high-end components. The VK-300X output stage is a symmetrical bipolar design as used in our award winning VK-6200 multi-channel power amplifier. The VK-300X input stage is configured to the same high standards as our award winning preamplifier line. We are also proud to offer an optional 6H30 SuperTube *Special Edition* gain stage (based on the one found in the top-of-the-line VK-50SE preamplifier) complete with paper-in-oil signal capacitors. The VK-300X user interface (the same as on our preamplifiers) offers the superb flexibility and ease of use that has set the standard in the industry. Even the VK-R3 remote is machined from a solid block of aluminum. This is an integrated amplifier of preeminent design and pedigree.

Superb Musicality

The best part, if one can get over the sheer beauty of the VK-300X, is the way it sounds. The VK-300X is pure BAT. "Open", "delicate", "smooth" and "powerful" are words that come easily to mind when trying to describe its sonic characteristics. We can say without hesitation that the VK-300X is competitive with reference-level separates at up to three times the price. Finally, musical finesse and superb performance have been combined without compromise into one convenient package. We invite you to visit your BAT audio specialist to experience this revelation for yourself. All you need to do is listen.

VK-300X Specifications

Number of Channels:	2
Output Power into 8 Ohms/4 Ohms: (Both at less than .2% THD)	150W/300W
Frequency Response:	2Hz to 180kHz
Inputs:	2 XLR + 3 RCA
Input Impedance:	100k Ω minimum each phase
Preamplifier Outputs:	1 XLR balanced output
Tape Output:	1 RCA
Speaker Outputs:	2 pair of five-way gold-plated binding posts
Dimensions:	19" x 5.75" x 15.5"
Weight:	50 lb.
Options	Remote control, Phono Module, 6922 tube gain stage, 6H30 SuperTube <i>Special Edition</i> gain stage
